

Python If Statements

The if statement in python is same as c language which is used test a condition. If condition is true, statement of if block is executed otherwise it is skipped.

Syntax of python if statement:

1. **if**(condition):
2. statements

Example of if statement in python

1. a=10
2. **if** a==10:
3. **print** "Hello User"

Output:

```
Hello User
```
